PRIMARY EXAMINER

1. The following is an examiner's statement of reasons for allowance: the amendment filed 7/31/2006 has overcome the prior art of record. The prior art of record fails to teach or fairly suggest said control device includes a shift register length control unit adapted to limit the circular transfer of data within said wiring loop and said shift register such that all of said data is circulated through said wiring loop a single time, and such that said data is at the same position of said shifted register before and after said circular transfer of said data as called for in claims 2 and 10, said control device includes a shift register length determination unit adapted to send a unique data marker circularly through said shift register and count the number of bits that pass through said wiring loop as said unique marker completes the circular loop through said shift register and returns to said wiring loop and which also includes at least one register adapted to store said result from said counter as to determined shift register length as called for in claims 5, 13, 19 and 26, wherein said process of selecting said shift register comprises controlling selectors to form a circuit between said output of said shift register and said input of said shift register by connecting a wiring loop between said output of said shift register and said input of said shift register as called for in claim 22. Therefore, claims 2-6, 8-14, 16-20 and 22-27 are presently allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
